Installation

This section will explain how to install a plug-in in Kintone

Steps to install a plug-in into Kintone

1

Have the zipped plug-in file ready

- There's no need to unzip the file after downloading

2

Install the plug-in at the subdomain level

- Refer to page 3 for details

3

Install the plug-in at the app level

- Refer to page 4 for details

Install Plug-ins in Kintone at the Subdomain Level

Install Plug-Ins by Importing a File

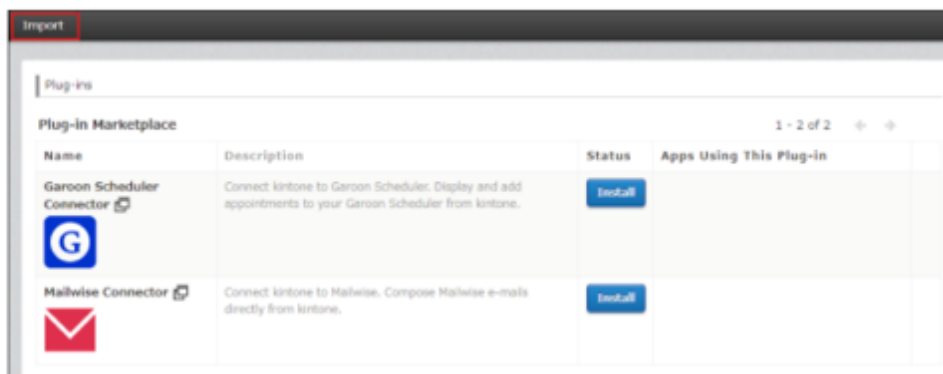

For plug-ins that you created or those that are provided by Kintone development partners, import the files to install the plug-ins.

1 Open the system administration screen.

2 From "Other", click "Plug-ins".

3 Click "Import".

4 Click "Browse" to select the plug-in file (plug-in-name.zip) you want to import.

Caution

- You should import a file only when the provider is trustworthy.

Note

- Plug-in files that remain in zip format can be directly imported.
- Files up to 100 MB in size can be imported.

5 Click "Import".

If the plug-in is listed as Imported Plug-ins, it means that the installation completes successfully. To update a plug-in that was installed by importing a file, re-import the file that contains the latest version of the plug-in. The import procedure is the same as when you installed the plug-in.

- This step allows the plug-in to be available for all apps throughout the subdomain.
- Administrators generally only need to perform this installation once per plug-in.
- Follow the same process to update the version of a plug-in in the future.

Install Plug-ins in Kintone at the App Level

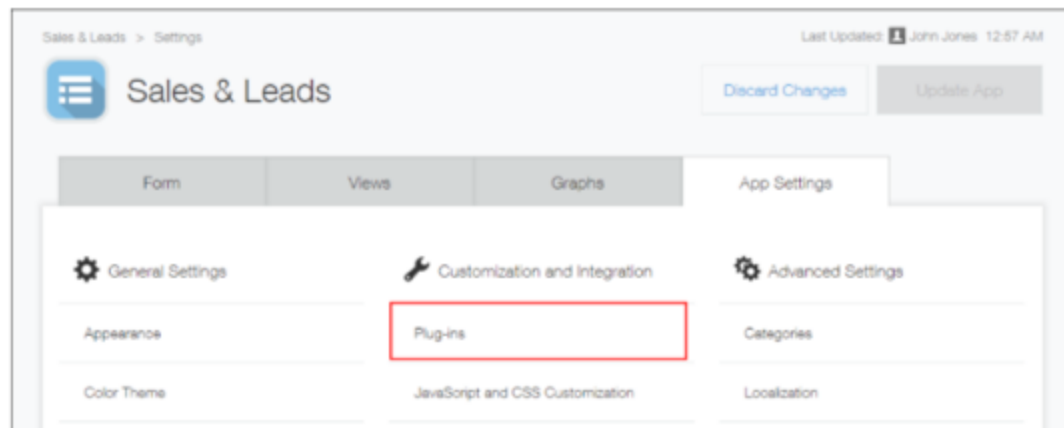

Adding Plug-Ins to an App

Plug-ins are used to extend the features of apps.

To use plug-ins in apps, you need to install them in Kintone System Administration. Then, app administrators can add plug-ins to their apps.

This page explains how to add plug-ins to apps.

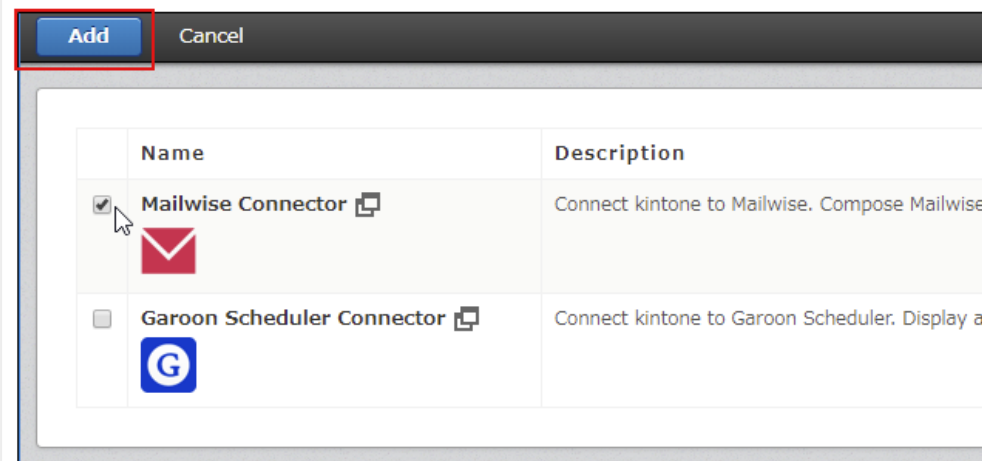

- 1 Open the app settings page.
- 2 Click the "App Settings" tab.
- 3 Under "Customization and Integration", click "Plug-ins".

- 4 Click "New".

- 5 Select the check boxes of plug-ins to be added, and then click "Add". Only plug-ins that were installed on Kintone System Administration are displayed in the plug-in list.

- Up to 20 plug-ins may be installed in a single app.

Accessing the Plug-in Settings

This section will explain how to access the plug-in settings in an app.

Access the plug-in settings page

Fields above the first blank space are not grouped by the tabs.

A set of tabs are generated from a "start" and "end" Blank Space element. Each tab has its own additional Blank Space element.

Fields display based on selected tab

A second set of tabs can be generated by another pair of "start" and "end" Blank Spaces elements.

Fields display based on selected tab

Logged-in user

1. Add a Blank Space element.
Enter in an element ID. In this example,
the element ID is "start_1".

This space will display the tabs.

2. Add another Blank Space element.
Enter in the element ID. In this example,
the element ID is "set1_tab1".

This space is used to determine the start
of the fields in a tab.

Form Settings Explanation

3. Add a final space field under all the fields that should be in a full set of tabs. In this example, the element ID is "end_1". The first set of tabs are complete.

4. Repeat step 1 to create the Blank Space elements for the second set of tabs

Note: Blank Space elements must have an Element ID. Blank Space elements without an Element ID will be ignored.

Plug-in Settings Explanation

Select "start_1" from the dropdown to set the "start_1" Blank Space element as the Start tab of the first set of tabs.

Select the Blank Space elements with Element ID's set to be displayed as tabs.

Select the tab that should be selected as the default when a user opens a record.

All Blank Space elements will be displayed automatically when the Start tab and End tab are selected. Rename each tab from its Element ID.

Select "end_1" from the dropdown. Repeat the process below for the second set of tabs.

Check to display the last selected tab as the active tab when accessing the record.

Start tab (Tab buttons)
start_1

End tab
end_1

☒ Remember last selected tab.

Enable Tab	Default tab	Space IDs	Tab Name
<input checked="" type="checkbox"/>	<input checked="" type="radio"/>	set1_tab1	Pricing
<input checked="" type="checkbox"/>	<input type="radio"/>	set1_tab2	Financing
<input checked="" type="checkbox"/>	<input type="radio"/>	set1_tab3	Site Information
<input checked="" type="checkbox"/>	<input type="radio"/>	set1_tab4	Notes

Start tab (Tab buttons)
start_2

End tab
end_2

☐ Remember last selected tab.

Enable Tab	Default tab	Space IDs	Tab Name
<input checked="" type="checkbox"/>	<input checked="" type="radio"/>	set2_tab1	Missing_Information
<input type="checkbox"/>	<input type="radio"/>	space1	space1

Plug-in Settings Fields

Plug-in Setting	Field Type	Notes
Start tab (Tab buttons)	Blank space	Displays a list of Blank space elements within the app. Select the Blank space element that should be the beginning of the tab set. The tabs will be displayed within this Blank space element. Make sure that the width of the selected element is wide enough to accommodate the width of all the tabs in the set. Otherwise, the tabs will be displayed vertically.
End tab	Blank space	Displays a list of Blank space elements within the app. Select the Blank space element that should be the end of the tab set. Once the end tab is selected, all Blank space elements with an Element ID that exist between the "Start tab" and "End tab" will be displayed in the table to the right of the settings automatically. These elements can be set as tabs in the tab set.
Remember last selected tab	N/A	Check the check box to have the app remember the last selected tab and display the last selected tab instead of the default tab when entering the record details again.
Enable Tab	N/A	Check the check box to enable the fields below the Blank Space element to be displayed only when the tab is selected. If this checkbox is not selected, the fields will be displayed in every enabled tab of the tab set.

Plug-in Settings Fields

Plug-in Setting	Field Type	Notes
Default Tab	N/A	Select the enabled Blank space element to be the default tab that is displayed upon page load.
Space IDs	N/A	Displays the Element ID of all available Blank space elements between the selected "Start tab" element and "End tab" element. This column is display only.
Tab Name	N/A	Enter a name to be displayed as the text on the tab. By default, the Blank space's Element ID is filled in.

Other Plug-in Settings

Open the plug-in settings in full screen mode

Open the following menu

Tab Views

The specified default tab will be used until a user clicks another tab. Once a user clicks a tab, a browser stores the selected tab and uses it as the default tab.

Start tab (Tab buttons)

start_1

End tab

end_1

☒ Remember last

Enable Tab	Default tab	Space IDs	Tab Name
<input checked="" type="checkbox"/>	<input checked="" type="radio"/>	Pricing	Pricing
<input checked="" type="checkbox"/>	<input type="radio"/>	Financing	Financing
